

Another Energy-Efficient Residential Building in the Brunckviertel District of Ludwigshafen, Germany External Thermal Insulation Composite System (ETICS) and Perimeter Insulation with Insulation Materials Made of Neopor®

- Continuation of the integrated renovation of the Brunckviertel district, which was carried out between 1997 and 2006 and included the energy-efficient restoration of approximately 500 residential properties
- Housing association:
BASF Wohnen + Bauen
- Perimeter insulation made of the new Neopor® F 5 Pro protects the perimeter area from temperature changes and mechanical stress
 - Lower pentane content allows for faster processing by the manufacturer
 - Easy to use and handle
- “Insulation boards made of Neopor provide better eco-efficiency than products made of Styropor® or other insulation materials. This makes them a good choice from an environmental as well as an economical perspective.”

André Zaman, Head of Planning Department
BASF Wohnen + Bauen
